<b>Red</b>	Frost, Ice and / or Snow are forecast to occur.
<b>Orange</b>	Road Surface Temperatures (RSTs) are forecast to be +0.5°C or below (including DRY roads below 0.0°C) - there is still a risk of frost, ice or snow. See the detail of the forecast for more information.
<b>Yellow</b>	RSTs are forecast to be between +0.6°C and +1.9°C - there is a lower risk of frost, ice or snow. See the detail of the forecast for more information.
<b>Green</b>	RSTs are forecast to be +2°C or higher

Minimum RST - refers to the road surface temperature and is given in degrees Celsius

Falling snow is given in cm and is an indication of how much may fall, not how much may settle.

Rainfall is given in mm and is an indication of how much rain is expected to fall during that hour.

Min temp, falling snow and / or road state are the worst conditions expected for each of these forecast elements within the period.

Where residual snow / ice remains on the road surface from a previous day, the shown colour state should be overridden and treated as **RED**
